Senator _____

U.S. Senate

Washington DC 20510

Right now the Senate is debating a Clean Energy bill that would mean more jobs, less pollution, and greater security.

The bill would make America more energy independent – creating 1.7 million new jobs by investing in secure, clean energy sources that are made in America.

But this bill won't work if corporate polluters refuse to pay their fair share, and instead lobby to weaken the clean air laws that reduce pollution.

As Montana's Senators Baucus and Tester help move this clean energy bill forward, they have the chance to stand up to the corporate polluters that are seeking bailouts and loopholes.

Call Senator Baucus (202-224-2651), and Senator Tester (202-224-2644), and urge them to support the **Clean Energy Jobs and American Power Act** and to make sure polluters don't succeed at weakening the bill at our expense.

Dear Senator _____

Our country needs a clean energy jobs bill that will boost our economy and fight global warming. Thousands of jobs could be created here in our state if only the U.S. were to invest wisely in clean energy.

The comprehensive energy and climate bill being discussed in the Senate right now should do more to build our clean energy economy – and not let polluters get away with their same old dirty business-as-usual ways. Millions of Americans already hold the most commonly needed job skills for global warming solutions. Strong, comprehensive energy and climate legislation will put them back to work, retaining and creating millions of good, clean energy jobs in both the revitalized manufacturing and construction sector and the new clean energy industries of tomorrow.

Don't let polluters hold back progress and prosperity. Please support a strong energy and climate bill that will create thousands of good jobs here in our state, build a clean energy economy, hold polluters accountable, and fight global warming.
